

1 STEPS

1. On the server

- i. Check all the desired instruments are connected correctly.
- ii. Check `Instruments` directory – make sure files are present for each of the instruments.
- iii. Run `Master.ck` – in the shell this is (assuming we are in the root project directory)

```
%> chuck src/Master
```

- iv. It will produce a lot of text, double check to make sure no errors were emitted.

2. On your own machine

- i. If you want to communicate over OSC
 - a. Double check the address patterns the server printed at the end of its initialisation, you should be good to go.
- ii. If you want to use MIDI
 - a. Run `Client.ck` – it needs some information to function correctly
